About Me

Senior Computer Science and Engineering student with a Finance minor and a strong analytical focus. Experienced in SQL, Python and statistics, from building datasets and testing hypotheses to delivering clear, actionable findings. Eager to build a career in data analytics, turning complex data into better business decisions.

Education

B.S. in Computer Science and Engineering - Sabancı University (2022 – Expected June 2027)

- *Minor in Finance*
- *CGPA: 3.62 / 4.00*
- *Full Scholarship*

Erasmus+ Exchange - Otto von Guericke University Magdeburg (April 2026 – July 2026)

- *Focused on data mining, database concepts and cloud infrastructure.*
- *Studied behavioral finance, linking investor psychology to market behavior.*

Kırmızı Çizgi Science High School (2018 – 2022)

- *Full Scholarship*

Experience

Software & Data Intern - BSX Enerji A.Ş. (August 2026 – September 2026)

- *Built an AI tool (Claude API, Supabase) turning meeting notes into client proposals; adopted by the company.*
- *Designed an ESP32 data pipeline that logs analysis-ready occupancy records the existing product discarded.*
- *Modeled the energy-savings vs. guest-comfort trade-off in a tunable C++ decision model.*
- *Structured customer-enquiry data by product and issue type, revealing key complaint patterns.*
- *Delivered product presentations and on-site demos to hotel clients.*

Selected Academic Projects

Behavioral Drivers of Bitcoin Price Movements (GitHub)

Tested whether sentiment and public-attention signals predict Bitcoin's next-day price direction.

- *Merged 4 sources (prices, 2+ GB of tweets, Google Trends, Fear & Greed Index) into a 2-year daily dataset.*
- *Engineered VADER sentiment scores and 94 time-series features (lags, rolling statistics, volatility regimes).*
- *Evaluated predictive power with hypothesis tests (Pearson, t-test, Mann–Whitney U) and ML models.*

Gamified Productivity Mobile App

Team project: a mobile app that gamifies focus and time management through a building-construction concept.

- *Collaborated with teammates to design and build the app in Flutter and Dart, splitting features across the team.*
- *Implemented authentication, local data storage, session tracking and a progress-visualization system.*

Multiplayer Real-Time Quiz Game

Networked quiz game where players compete over the internet in real-time question rounds.

- *Built a client-server architecture with Python sockets and Tkinter interfaces.*
- *Created a scoring system that drives competitive real-time gameplay.*

Skills

Data & Analytics: *SQL, Python (pandas, NumPy, SciPy, scikit-learn, matplotlib, seaborn), Statistics, ML, Excel*
Databases & Cloud: *MySQL, PostgreSQL, Supabase, Google Cloud (GKE, Cloud Run, Vertex AI, Cloud SQL)*
Programming & Tools: *Python, C++, Dart, Flutter, Tkinter, Git, Jupyter, VS Code, Claude API, ESP32, Blender*
Certifications: *Google Cloud Skill Badges: Infrastructure, Scaling & Automation, GKE, Cloud Run, Monitoring*
Languages: *Turkish (Native), English (Advanced)*
